

2027 expected plant availability (updated 10th August 2026)

Please note that our species availability is subject to change and not all species will be available each year. There are many variables to consider when propagating plants including seed availability and quality, and each season's growing conditions.

Our seed is sourced from the Adelaide Hills and Barossa (Out of provenance species other parts of SA).

Other SA species and provenances may be ordered if own seed is supplied.

If requiring difficult to propagate species and/or 20 or more of a species please place an order (the winter before) so you are not disappointed at our Plant Sales (first weekend of June, July and August). Ordered plants will be ready for collection late May-June.

Price Categories (refer to Price List).

● black tubes : standard tubestock

● green tubes : cutting grown or difficult to collect seed and/or propagate

● orange tubes : very difficult to collect seed and/or propagate
